

Triple Point Digital 9  
Infrastructure plc (D9)

## Statement for Digital 9 Infrastructure plc (D9) [referred to as the Company] in response to the FCA's Sustainability Disclosure Requirement (SDR) and labelling rules.

November 2024

As a result of the Company entering wind-down and the orderly realisation of assets, it will not comply with the Sustainability Disclosure Requirement (SDR) and will not be seeking to apply one of the four available labels.

The intention of the SDR regime is to support consumers to make an informed investment choice. However, the Company is no longer seeking new investors and is not being actively marketed to any potential investors, including retail customers. There is therefore limited benefit were the Company to comply with the regime. At the same time, the main purpose for the Company as it enters wind-down is a responsible and managed sale of assets to maximise value for existing shareholders. The limited benefit when the Company is not seeking new investors has been weighed against the cost impact for existing investors and it has been deemed most appropriate not to comply.
